**Pearson Edexcel International Advanced Level**

**Wednesday 18 October 2023**

Morning (Time: 1 hour 30 minutes) **Paper reference** **WMA13/01**

**Mathematics**

**International Advanced Level**

**Pure Mathematics P3**

**You must have:**  
Mathematical Formulae and Statistical Tables (Yellow), calculator

Total Marks

**Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.**

### Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Inexact answers should be given to three significant figures unless otherwise stated.

### Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 10 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

3. (a) Using the identity for  $\cos(A + B)$ , prove that

$$\cos 2A \equiv 2 \cos^2 A - 1 \quad (2)$$

(b) Hence, using algebraic integration, find the exact value of

$$\int_{\frac{\pi}{8}}^{\frac{\pi}{4}} (5 - 4 \cos^2 3x) dx \quad (4)$$

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

8. (a) Prove that

$$2 \operatorname{cosec}^2 2\theta(1 - \cos 2\theta) \equiv 1 + \tan^2 \theta \quad (4)$$

(b) Hence solve for  $0 < x < 360^\circ$ , where  $x \neq (90n)^\circ$ ,  $n \in \mathbb{N}$ , the equation

$$2 \operatorname{cosec}^2 2x(1 - \cos 2x) = 4 + 3 \sec x$$

giving your answers to one decimal place.

*(Solutions relying entirely on calculator technology are not acceptable.)*

(4)

9.

In this question you must show all stages of your working.

Solutions relying on calculator technology are not acceptable.

Figure 2

Figure 2 shows a sketch of the curve with equation

$$y = |2 - 4 \ln(x + 1)| \quad x > k$$

where  $k$  is a constant.

Given that the curve

- has an asymptote at  $x = k$
- cuts the  $y$ -axis at point  $A$
- meets the  $x$ -axis at point  $B$

as shown in Figure 2,

(a) state the value of  $k$

(1)

(b) (i) find the  $y$  coordinate of  $A$

(ii) find the exact  $x$  coordinate of  $B$

(3)

(c) Using algebra and showing your working, find the set of values of  $x$  such that

$$|2 - 4 \ln(x + 1)| > 3$$

(5)
